KOMAL KUMARI

Bengaluru, Karnataka | 8789514381 | komalkumari13443@gmail.com | linkedin.com/in/komalkumari2004

PROFILE SUMMARY

Software Engineer (Fresher) with hands-on experience building RESTful APIs and full-stack applications using Java, Spring Boot, Hibernate, MySQL, and React.js, following Agile practices and MVC/OOP design principles. Skilled in applying GenAI techniques — LangChain, Retrieval-Augmented Generation (RAG), and vector databases — to build intelligent, production-style applications. Strong foundation in Data Structures & Algorithms, SQL, and API testing with Postman, with proven ability to independently design, build, and validate backend systems end to end.

TECHNICAL SKILLS

Languages & Concepts: Java, Python, C, SQL, OOP, Data Structures & Algorithms, Design Patterns, MVC Architecture, Multithreading

Backend & Databases: Spring Boot, Spring Data JPA, RESTful APIs, Microservices, JDBC, Hibernate, MySQL, H2 Database, Spring Security

AI / GenAI & ML: LangChain, OpenAI API, Retrieval-Augmented Generation (RAG), FAISS (Vector DB), Prompt Engineering, Scikit-learn, Pandas, NumPy

Frontend & Tools: React.js, Git, GitHub, Postman, Maven, Agile/Scrum, Unit Testing, VS Code, IntelliJ IDEA, Eclipse

WORK EXPERIENCE

Java Full Stack Developer — SKYLLX Technologies Pvt Ltd, Bengaluru **Jan 2026 – May 2026**

- Built a full-stack e-commerce application backend using Java, Spring Boot, Hibernate, and MySQL, exposing RESTful APIs consumed by a React.js frontend.
- Designed and implemented authentication, product management, shopping cart, and order management modules using a CRUD-based service architecture.
- Integrated Spring Data JPA with MySQL for persistence and validated all API endpoints using Postman prior to release, reducing post-deployment defects.
- Applied MVC architecture and OOP principles to structure a scalable, maintainable backend codebase collaboratively within an Agile team.

Software Intern — Tech Miya Solution Pvt Ltd, Bengaluru **Jun 2025 – Nov 2025**

- Designed a machine learning-based bot detection system in Python (Scikit-learn, Pandas, NumPy) to classify user traffic and support backend security decisions.
- Engineered features (login frequency, click behavior, session duration) and benchmarked Decision Tree, Random Forest, and Logistic Regression models on accuracy, precision, and recall to select the best-performing classifier.
- Integrated Spring Data JPA with MySQL to streamline backend database operations and validated API endpoints using Postman.

PROJECTS

Nexa-Cart Shopping App **Jan 2026 – May 2026**

- Architected backend services for a full-stack e-commerce application handling products, cart operations, and order processing, with secure authentication and database integration.
- Implemented RESTful APIs following MVC architecture and OOP principles, using Git for version control and Postman for endpoint testing and validation.

AI-Powered Telecom Support Chatbot **Jun 2026 – Jul 2026**

- Built an AI chatbot for telecom customer support that automatically answers billing, plan, and network queries, reducing manual support workload.
- Implemented Retrieval-Augmented Generation (RAG) using LangChain and a FAISS vector database to ground responses in company FAQs/documents, improving accuracy over pure LLM responses.
- Connected the chatbot to a Spring Boot backend to log conversations and forward unresolved issues to human support agents for seamless escalation.

EDUCATION

B.E. in Computer Science Engineering — City Engineering College, Bengaluru 2022 – 2026

CGPA: 8.7/10

Higher Secondary (12th Grade) — Reshma Devi Project+2 Girl High School 2020 – 2022

CGPA: 3.0/4

CERTIFICATIONS

Spring Professional Certification — Spring, 2025

LANGUAGES

English, Hindi
